EDUCATION

Vellore Institute of Technology

Integrated Master of Technology in Artificial Intelligence

Aug 2022 – May 2027

CGPA: **9.01 / 10.0**

TECHNICAL SKILLS

Languages & Frameworks: Python, C++17, JavaScript, Django, Node.js, Express.js

Cloud & DevOps: AWS (Lambda, S3, SQS, DynamoDB, ElastiCache, API Gateway), Docker, Terraform, GitHub Actions

Databases & Tools: PostgreSQL, DynamoDB, Redis, Apache Airflow, libpcap, WebSockets

EXPERIENCE

Backend Developer Intern — Virat Merchant Pvt. Ltd.

Dec 2025 – Feb 2026 | Hybrid

- Engineered Apache Airflow DAG pipelines ingesting data from 3+ AWS sources (S3, RDS, DynamoDB), eliminating all ad-hoc scripts and reducing manual pipeline intervention to zero.
- Architected cron job scheduling logic across 10+ pipeline stages with parallel execution of independent tasks, cutting estimated end-to-end runtime by 40%.
- Owned production pipeline reliability via structured failure alerting and retry logic, achieving zero undetected failures across the entire 3-month internship.

PROJECTS

NetSpectre — Deep Packet Inspection Engine

[GitHub](#)

C++17 • Docker • WebSockets • libpcap • TLS/JA3

- Engineered a multi-threaded C++17 DPI engine classifying live traffic via TLS SNI inspection, achieving sub-1ms per-flow classification across multiple CPU cores using producer-consumer queues.
- Integrated TLS fingerprinting (JA3) and stateful flow tracking to identify client applications by cryptographic signature, enabling blocking by IP, domain, or application type.
- Shipped a real-time WebSocket dashboard with GeoIP mapping and IDS (SYN flood, port scan detection) — containerized and published to Docker Hub as jayesh3103/netspectre-dpi.

Serverless URL Shortener

[GitHub](#)

Python • AWS Lambda • DynamoDB • ElastiCache (Redis) • Terraform • GitHub Actions

- Designed a serverless URL shortening system on AWS using Terraform IaC — choosing Redis over in-memory caching to achieve sub-10ms redirect latency under concurrent load.
- Deployed an end-to-end CI/CD pipeline via GitHub Actions, enabling zero-touch Lambda and infrastructure deployments with zero manual steps post-merge.
- Architected a two-Lambda separation of concerns (URL creation vs. redirect) with DynamoDB as primary store, producing a stateless backend requiring no provisioned concurrency.

DataPulse — Scalable Data Collection Platform

[GitHub](#)

Python • Django • AWS SQS + Lambda + S3 • Docker • Twilio

- Built an event-driven pipeline (S3 → SQS → Lambda) where SQS buffers Lambda from bulk CSV upload spikes, ensuring eventual consistency across millions of records.
- Delivered 4 production features: Twilio SMS alerts, Google Sheets sync, bilingual slang search via Translate API, and receipt SMS on form submission.
- Containerized the Django application using Docker, enabling single-command deployment and eliminating dependency failures across dev, staging, and production.

CERTIFICATIONS

- [AWS Certified AI Practitioner \(AIF-C01\) — Amazon Web Services](#)
- [AWS Certified Cloud Practitioner \(CLF-C02\) — Amazon Web Services](#)
- [AWS Certified Solutions Architect Associate \(SAA-C03\) — Amazon Web Services](#)
- [Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate — Oracle](#)
